DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see pages 5-9 of the response, filed 5/11/2004, with respect to Claim 1 have been fully considered and are persuasive. The rejection of Claim 1 has been withdrawn.

Allowable Subject Matter

2. Claims 1 and 3-10 are allowed.

3. The following is an examiner's statement of reasons for allowance: Independent Claim 1 is allowable over the prior art because of the clamping member having a middle reinforced region with two outer leaf spring elements all of which is made entirely of plastic. Furthermore, the clamping member specifically requires that the leaf spring elements have a thickness that varies over their length so that when force is applied to the clamping member the leaf springs elongate minimally preventing relaxation or creep of the leaf spring elements. The prior art made of record in the previous Office Action, U.S. Patent 5,016,514 to Kaufman, upon further review has been determined to not vary the thickness of the spring bar (30) over the length of the spring bar, but rather the width of the spring bar is varied to enable the spring bar to exert a uniform force across the spring bar. Therefore, the Kaufman reference is no longer considered to teach the instant invention, however it remains the closest prior art in regards to the field of the instant invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
